

Merry Hill Infant School and Nursery - Knowledge organiser

Computing

Topic: Coding

Year Group : 2

Term: Summer 1

Key Knowledge

What is computer programming?	<p>Computer programming can also be called coding.</p> <p>A person (coder) writes instructions (code) for the computer. The computer follows the instructions to run programs.</p>			
How do you make a computer program?	<table border="1"> <tr> <td> <p>Design - think of an idea and how it might work.</p>  </td> <td> <p>Write the algorithm (precise set of instructions)</p> <ol style="list-style-type: none"> 1. Tuna should swim left. 2. Clown fish should swim right. 3. Trout should swim right.  </td> <td> <p>Make the code (The code represents the algorithm)</p>  </td> </tr> </table>	<p>Design - think of an idea and how it might work.</p> 	<p>Write the algorithm (precise set of instructions)</p> <ol style="list-style-type: none"> 1. Tuna should swim left. 2. Clown fish should swim right. 3. Trout should swim right. 	<p>Make the code (The code represents the algorithm)</p> 
<p>Design - think of an idea and how it might work.</p> 	<p>Write the algorithm (precise set of instructions)</p> <ol style="list-style-type: none"> 1. Tuna should swim left. 2. Clown fish should swim right. 3. Trout should swim right. 	<p>Make the code (The code represents the algorithm)</p> 		
What are the different types of code blocks?	<table border="1"> <tr> <td> <p>Events</p>  </td> <td> <p>Objects</p>  </td> <td> <p>Actions</p>  </td> </tr> </table>	<p>Events</p> 	<p>Objects</p> 	<p>Actions</p> 
<p>Events</p> 	<p>Objects</p> 	<p>Actions</p> 		
What is a collision detection event?	<p>A collision detection event is when a computer is programmed to know when 2 objects collide.</p> 			
What is nesting?	<table border="1"> <tr> <td> <p>Nesting is when a command is inside another command.</p>  </td> <td> <p>Separate commands</p>  </td> </tr> </table>	<p>Nesting is when a command is inside another command.</p> 	<p>Separate commands</p> 	
<p>Nesting is when a command is inside another command.</p> 	<p>Separate commands</p> 			

Key Vocabulary

Algorithm	A precise set of instructions.
Bug	When something is wrong with the code so the program doesn't work correctly.
Collision	When 2 objects meet each other
Command	One instruction
Debugging	Looking for problems in codes, fixing the problems and then testing again.
Event	Something that causes a code to run e.g. when clicked...
Image	Picture
Input	Information going in to the computer.
Output	What the computer gives you after following a code.
Predict	Say what you think will happen when a piece of code is run.
Sequence	When something happens in order
Timer	Tells something when to happen e.g. in 5 seconds....
Run	To make the instructions in a program start to work.
